### ANATOMIC PATHOLOGY

Order: 1027281443

Status: Edited Result - FINAL    Visible to patient: No (not released)    Next appt: None    Dx:  
Thrombocytopenia, unspecified (HCC); ...

### Narrative

Performed by: CoPath

Texas Health Harris Methodist Hospital Southwest  
6100 Harris Parkway      Fort Worth, TX 76132      (817) 433-6700  
W. Frederick Bierbaum, M.D., Laboratory Medical Director

#### HSW HISTOLOGY REPORT

Patient Name: DEL-VECCHIO, DUANE      Accession #: SS20-4511  
Med. Rec. #: 2000074024      Collected: 9/22/2020  
DOB: 6/3/1958 (Age: 62)      Received: 9/22/2020  
Gender: M      Reported: 9/28/2020  
Physician(s): C Daniel Jordan DO  
Jessica Hals, DO

Specimen(s) Received  
A:perisplenic fat and spleen - fresh  
B:liver biopsy - permanent

Clinical History  
Pre-op diagnosis: Splenomegaly, not elsewhere classified [R16.1]  
Thrombocytopenia, unspecified (HCC) [D69.6]

#### Final Diagnosis

- A)      Spleen, splenectomy:
  - Splenic marginal zone lymphoma.
- B)      Liver, core needle biopsy:
  - Mild portal nonspecific chronic inflammation with no interface or lobular activity
  - Minimal steatosis (<5%)
  - No pathologic fibrosis (stage 0)
  - No bile duct injury or loss

- No increased iron

Comment

Please see the attached consultation report from ProPath Services, LLC, for the splenectomy (CE20-2017) and the liver biopsy (CE20-2016).

Billing Fee Code(s): A; 88305, 99001, 99001, 88342, s/o 341(6)

B; 88307, 88313(4)

Rosemary E. Detweiler, MD

Gross Description

Part A is received fresh, labeled with the patient's name and "perisplenic fat and spleen." It consists of a 30.0 x 15.0 x 2.0 cm unremarkable portion of yellow adipose tissue and a 25.0 x 23.0 x 9.0 cm spleen with an attached 3.5 x 3.5 x 3.5 cm accessory spleen and a trimmed weight of 212 grams. The spleen is intact. Cut sections show a red-brown, vaguely nodular parenchyma with normal red and white pulp. No mass lesions are identified. A portion of the tissue is submitted in RPMI solution and sent for flow cytometry work-up.

Remaining representative sections are submitted as follows:

A1: Hilar vessels to include perisplenic fat received separate in the container

A2: Accessory spleen

A3-A8: Representative spleen.

Part B is received in formalin on a Telfa pad, labeled with the patient's name and "liver biopsy permanent." It consists of three tan-brown soft tissue cores ranging in length from 0.4 to 1.3 cm with an average diameter of 0.1 cm which are entirely submitted in B1. AV/kg

Microscopic Description

Microscopic examination performed, detailed in final diagnosis. Both the splenectomy specimen (A) and the liver biopsy specimen (B) have been submitted to ProPath Services, LLC, 1355 Riverbend Drive, Dallas, Texas 75247 for consultation. The ProPath accession number for the splenectomy is CE20-2017. ProPath accession number for the liver biopsy is CE20-2016.

In addition to the H&E specimen of the liver biopsy, special stains for iron, reticulin, trichrome, and PAS with diastase are examined.
